

Center Console Curtain

Installation Instructions

Getting started is easy.

A

1. First, locate the only royal blue webbing strap located on your Center Console Curtain. Attach the strap to the center bar or T-top frame in front of the electronics box under your T-top. Note: There are many ways to install your curtain. You may need an additional webbing strap or suction cups for boats with hard tops. (See photos A & B)

B

2. Next, find the two black webbing straps located on each side of the blue strap, and attach to the port and starboard sides of the T-top frame. Note: If you have a hard top, you may need suction cups to secure to. Clean the hard top surface first then attach suction cups in the proper location. (See photo A & B)

C

3. Attach the zipper on the port side at the top of the curtain to the rear section. Continue to attach the connector straps of the curtain to the T-top frame. Now, attach the zipper on the starboard side at the top and zip closed. (See Photo C)
4. Make sure that your curtain is covering the front seat or cooler and your helm seat.

You're Done!
